EMMANUEL AGÜERO ROJAS

Software Engineer — Backend & Full-Stack · Blockchain / Web3
+506 8433-9541 · emmanuelaguerorojas@gmail.com · linkedin.com/in/emmanuelaguerorojas · github.com/EmmanuelAR · emmanuelaguerorojas.com
Alajuela, Costa Rica (Remote-eligible, GMT-6)

SUMMARY

Backend and full-stack engineer with 3+ years shipping production systems in fintech and Web3. Own a Snap Finance onboarding backend gating ∼$95M/month in application volume, and co-founded two companies on the side: Cavos (embedded-wallet infrastructure for Starknet, $25K raised) and Framezz (selfie-search photo platform live at 12+ endurance races). Comfortable owning a service from design through on-call, and equally comfortable pitching investors.

SKILLS

Languages: Java · JavaScript/TypeScript · Python · C++ · SQL · Cairo · Solidity
Backend & Frameworks: Spring Boot · Node.js · Next.js · React · PostgreSQL · REST APIs
Cloud & Infra: AWS · Azure · Supabase · MongoDB · Git · CI/CD · Postman · Jira
Blockchain / Web3: Smart contracts (Solidity, Cairo) · Starknet · Ethereum mainnet · self-custodial wallet infra

EXPERIENCE

Community Ambassador — Cursor Community *Aug 2026 – Present · Remote · Full-time*

- Drive adoption of AI-native software development across the developer ecosystem, by growing the Cursor community and building connections across startups, universities, and tech organizations.
- Help developers apply AI tools to real-world workflows, by leading educational initiatives, organizing workshops and hackathons, and growing strategic partnerships and technical content.

Co-Founder / Software Engineer — Studio Framezz *May 2025 – Present · Remote · Part-time*

- Validated product-market fit in Costa Rica's endurance-sports market, as measured by ∼$2K in revenue within the first two months in production, by co-founding and shipping Framezz, an IVA-compliant selfie-search photo platform for event photography.
- Indexed and served 40K+ photos across 12+ live races (∼3K per event) — including Ironman 70.3 CapCana (Dominican Republic), the Disney Princess Half Marathon (Orlando), BMW Lindora Run, and Clásica Palmarín MTB (Costa Rica) — by architecting and shipping the platform end-to-end in Next.js/TypeScript on an AWS S3-driven storage and delivery pipeline.
- Kept the platform live and reliable at every event, by acting as on-site technical lead shipping features and resolving issues in real time.

Co-Founder / Software Engineer — Cavos *Apr 2025 – Present · Remote · Part-time*

- Validated market demand for seedless, self-custodial onboarding, as measured by $25K raised in pre-seed funding, by co-founding Cavos and designing an embedded-wallet flow that onboards users via Google or Apple login — no seed phrase, no wallet extension.
- Landed Cavos' first production integration (Jokers of Neon), live on Ethereum mainnet and Starknet, by architecting and shipping the full onboarding stack in Next.js, React, Solidity, and Cairo.
- Built investor and ecosystem visibility for Cavos, by representing the company at Devcon Cannes 2025, Devconnect Argentina 2025, and multiple Costa Rica tech events.

Software Development Engineer II — Snap Finance *Jan 2023 – Present · Alajuela, CR · Full-time*

- Own the onboarding backend gating new-user revenue for Snap Finance, as measured by ∼$95M/month in application volume, by handling design, delivery, and on-call incident response for production traffic.
- Improved onboarding completion reliability, as measured by a 70% cut in drop-off, by diagnosing recurring failures down to root cause and shipping targeted backend fixes.
- Kept onboarding microservices reliable and shippable under Agile sprints, by building and maintaining them in Java, Spring Boot, and Node.js on AWS with CI/CD alongside product, QA, and infra teams.
- Earned two promotions in two years (Intern → SDE I → SDE II), by owning projects end-to-end from technical design through production rollout.

PROJECTS

- **Lumos — CLMM Liquidity Manager** (Next.js, Cairo): DeFi tool for concentrated liquidity pools — impermanent-loss estimation, full-range vs. concentrated simulations, automated position optimization.
- **Go Stark Me — Fundraising on Starknet** (Next.js, Cairo): Decentralized fundraising platform using Cairo smart contracts for low-cost, non-technical-friendly Web3 donations.

EDUCATION

B.Eng., Systems Engineering — Universidad Nacional, Costa Rica *Feb 2018 – Nov 2022*
Blockchain, Solidity, and Governance with Optimism — Universidad CENFOTEC *Aug 2024*
