

EMMANUEL AGÜERO ROJAS

Software Engineer — Backend & Full-Stack · Blockchain / Web3

+506 8433-9541 | emmanuelaguero Rojas@gmail.com | linkedin.com/in/emmanuelaguero Rojas | github.com/EmmanuelAR | Alajuela, Costa Rica
(Remote-eligible, GMT-6)

SUMMARY

Backend and full-stack engineer with 3+ years shipping production systems in fintech and Web3. Own mission-critical onboarding infrastructure at Snap Finance, and co-founded two companies: Cavo (embedded-wallet infrastructure for Starknet) and Framezz (selfie-search photo platform for event photography). Comfortable owning a service from design through on-call, and equally comfortable pitching investors.

SKILLS

Languages	Java · JavaScript/TypeScript · Python · C++ · SQL · Cairo · Solidity
Backend & Frameworks	Spring Boot · Node.js · Next.js · React · PostgreSQL · REST APIs
Cloud & Infra	AWS · Azure · Supabase · MongoDB · Git · CI/CD · Postman · Jira
Blockchain / Web3	Smart contracts (Solidity, Cairo) · Starknet · Ethereum mainnet · self-custodial wallet infra

EXPERIENCE

Co-Founder / Software Engineer — Studio Framezz

May 2025 – Present · Remote

- Co-founded Framezz, a selfie-search photo platform for event photography (endurance races, marathons) with IVA-compliant invoicing for the Costa Rican market.
- Built the platform end-to-end with Next.js and TypeScript across frontend and backend, backed by an AWS infrastructure (S3-driven storage and delivery pipeline plus the broader AWS suite) that indexes and serves photos from live events.
- Live at races including Ironman 70.3 CapCana (Dominican Republic), the Disney Princess Half Marathon (Orlando), BMW Lindora Run, and Clásica Palmarín MTB (Costa Rica); act as technical lead shipping features and support.

Co-Founder / Software Engineer — Cavo

Apr 2025 – Present · Remote

- Co-founded Cavo, embedded-wallet infrastructure for Starknet apps that lets teams onboard users into self-custodial smart accounts with a Google or Apple login — no seed phrase, no wallet extension.
- Architected and shipped the full stack (Next.js, React, Solidity, Cairo) powering onboarding flows live on Ethereum mainnet and Starknet, including the production integration with Jokers of Neon.
- Raised \$25K in pre-seed funding and represented Cavo at Devcon Cannes 2025, Devconnect Argentina 2025, and multiple Costa Rica tech events.

Software Development Engineer II — Snap Finance

Jan 2023 – Present · Alajuela, CR

- Own the end-to-end user onboarding backend that gates new-user revenue, handling design, delivery, and on-call incident response for production traffic.
- Diagnosed recurring onboarding failures down to root cause and shipped targeted backend fixes that measurably improved completion reliability for production traffic.
- Build and maintain microservices in Java, Spring Boot, and Node.js on AWS, deployed through CI/CD pipelines under Agile sprints alongside product, QA, and infra teams.
- Promoted Intern → SDE I → SDE II in two years by owning projects end-to-end, from technical design through production rollout.

PROJECTS

- Lumos — CLMM Liquidity Manager** (Next.js, Cairo): DeFi tool for concentrated liquidity pools — impermanent-loss estimation, full-range vs. concentrated simulations, automated position optimization.
- Go Stark Me — Fundraising on Starknet** (Next.js, Cairo): Decentralized fundraising platform using Cairo smart contracts for low-cost, non-technical-friendly Web3 donations.

EDUCATION

B.Eng., Systems Engineering — Universidad Nacional, Costa Rica · Feb 2018 – Nov 2022

Blockchain, Solidity y Gobernanza con Optimism — Universidad CENFOTEC · Aug 2024

LANGUAGES

English — Fluent · Spanish — Native
